

Razorpay Route Split Payment — Diagrams

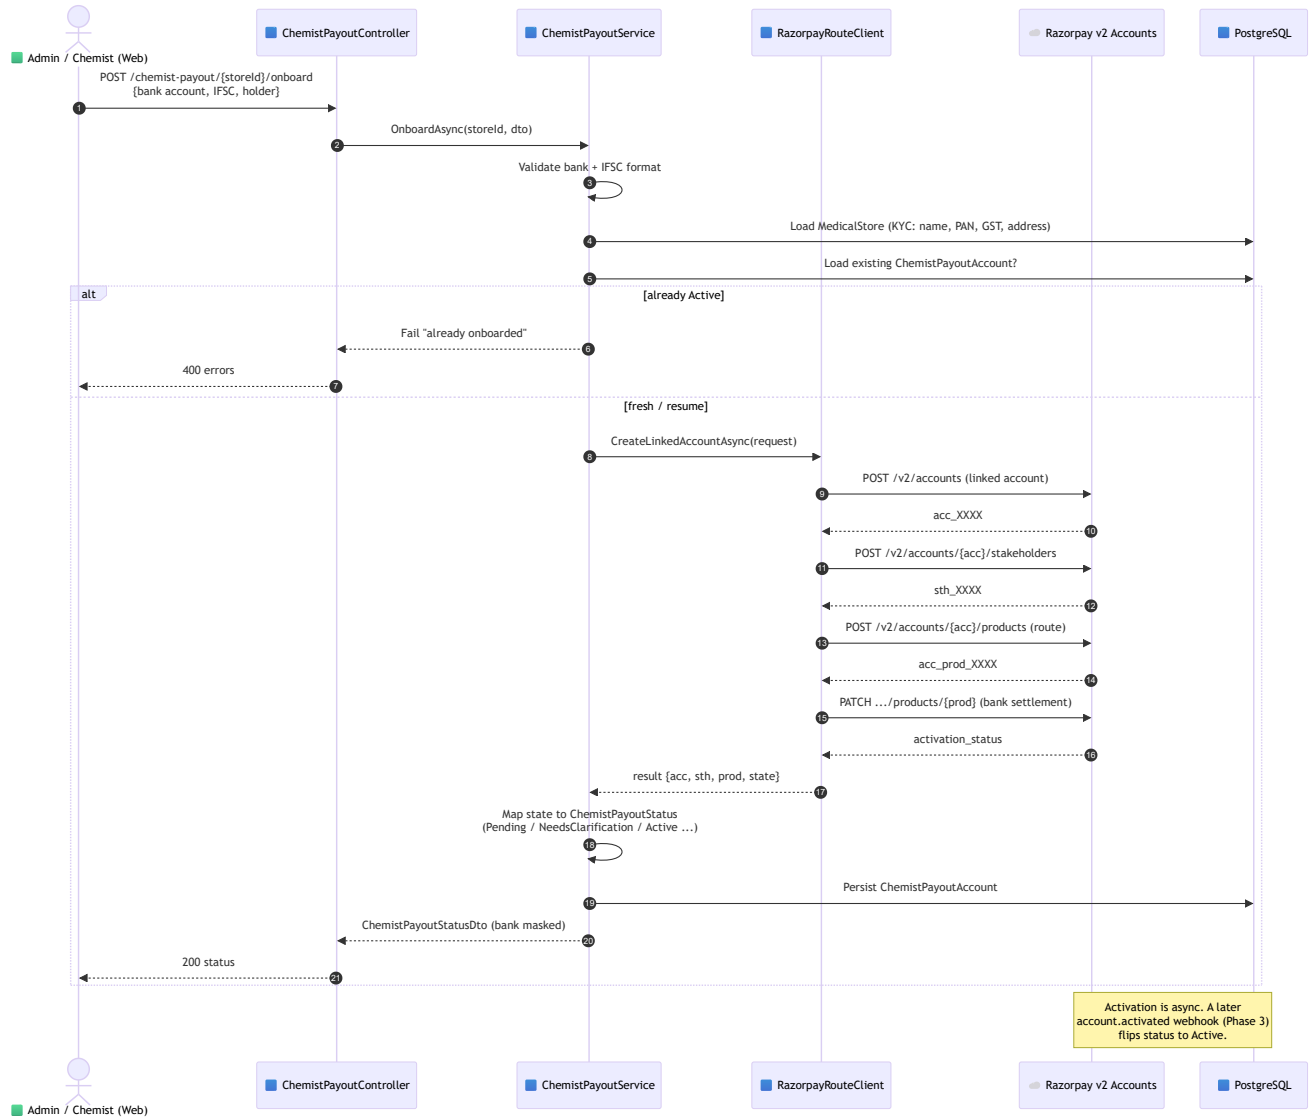

Companion to [paymentRoutePlan.md](#) and [paymentImplementationPlan.md](#). Diagrams use **Mermaid** (renders in GitHub / VS Code / most Markdown viewers).

Legend: ■ backend · ■ web · ■ mobile · ☉ external (Razorpay). **Phase 1** = chemist linked-account onboarding (built). **Phase 2** = order payment + split (planned).

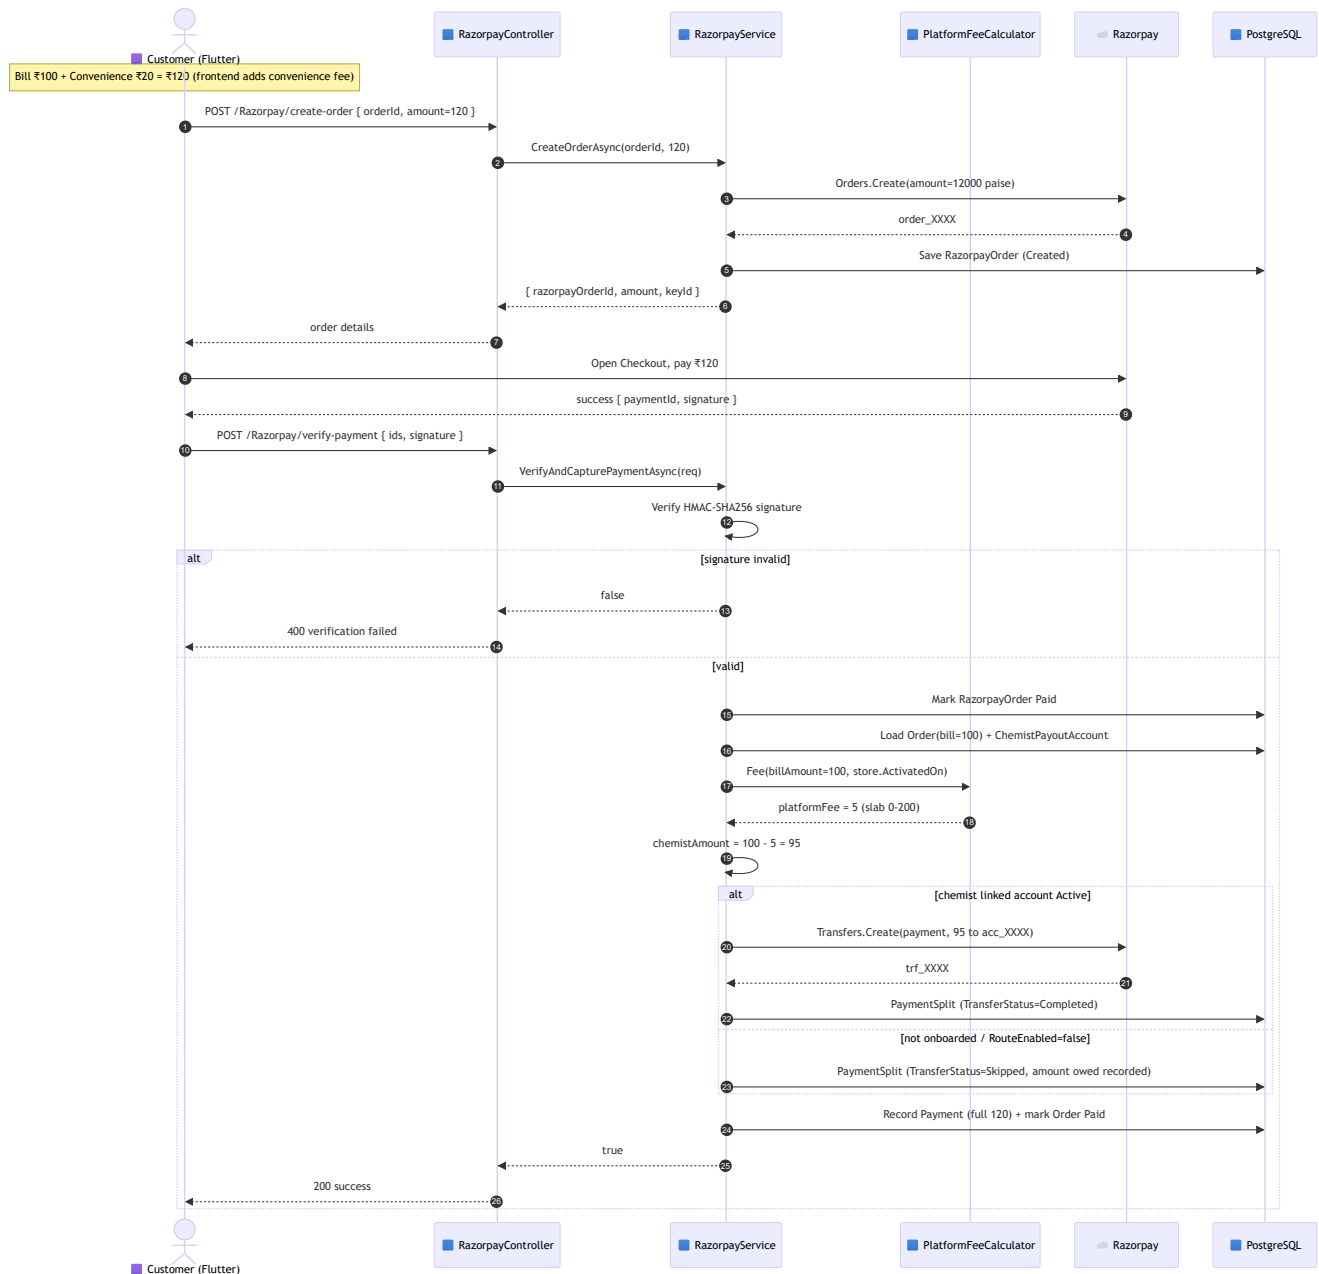

1. System Architecture

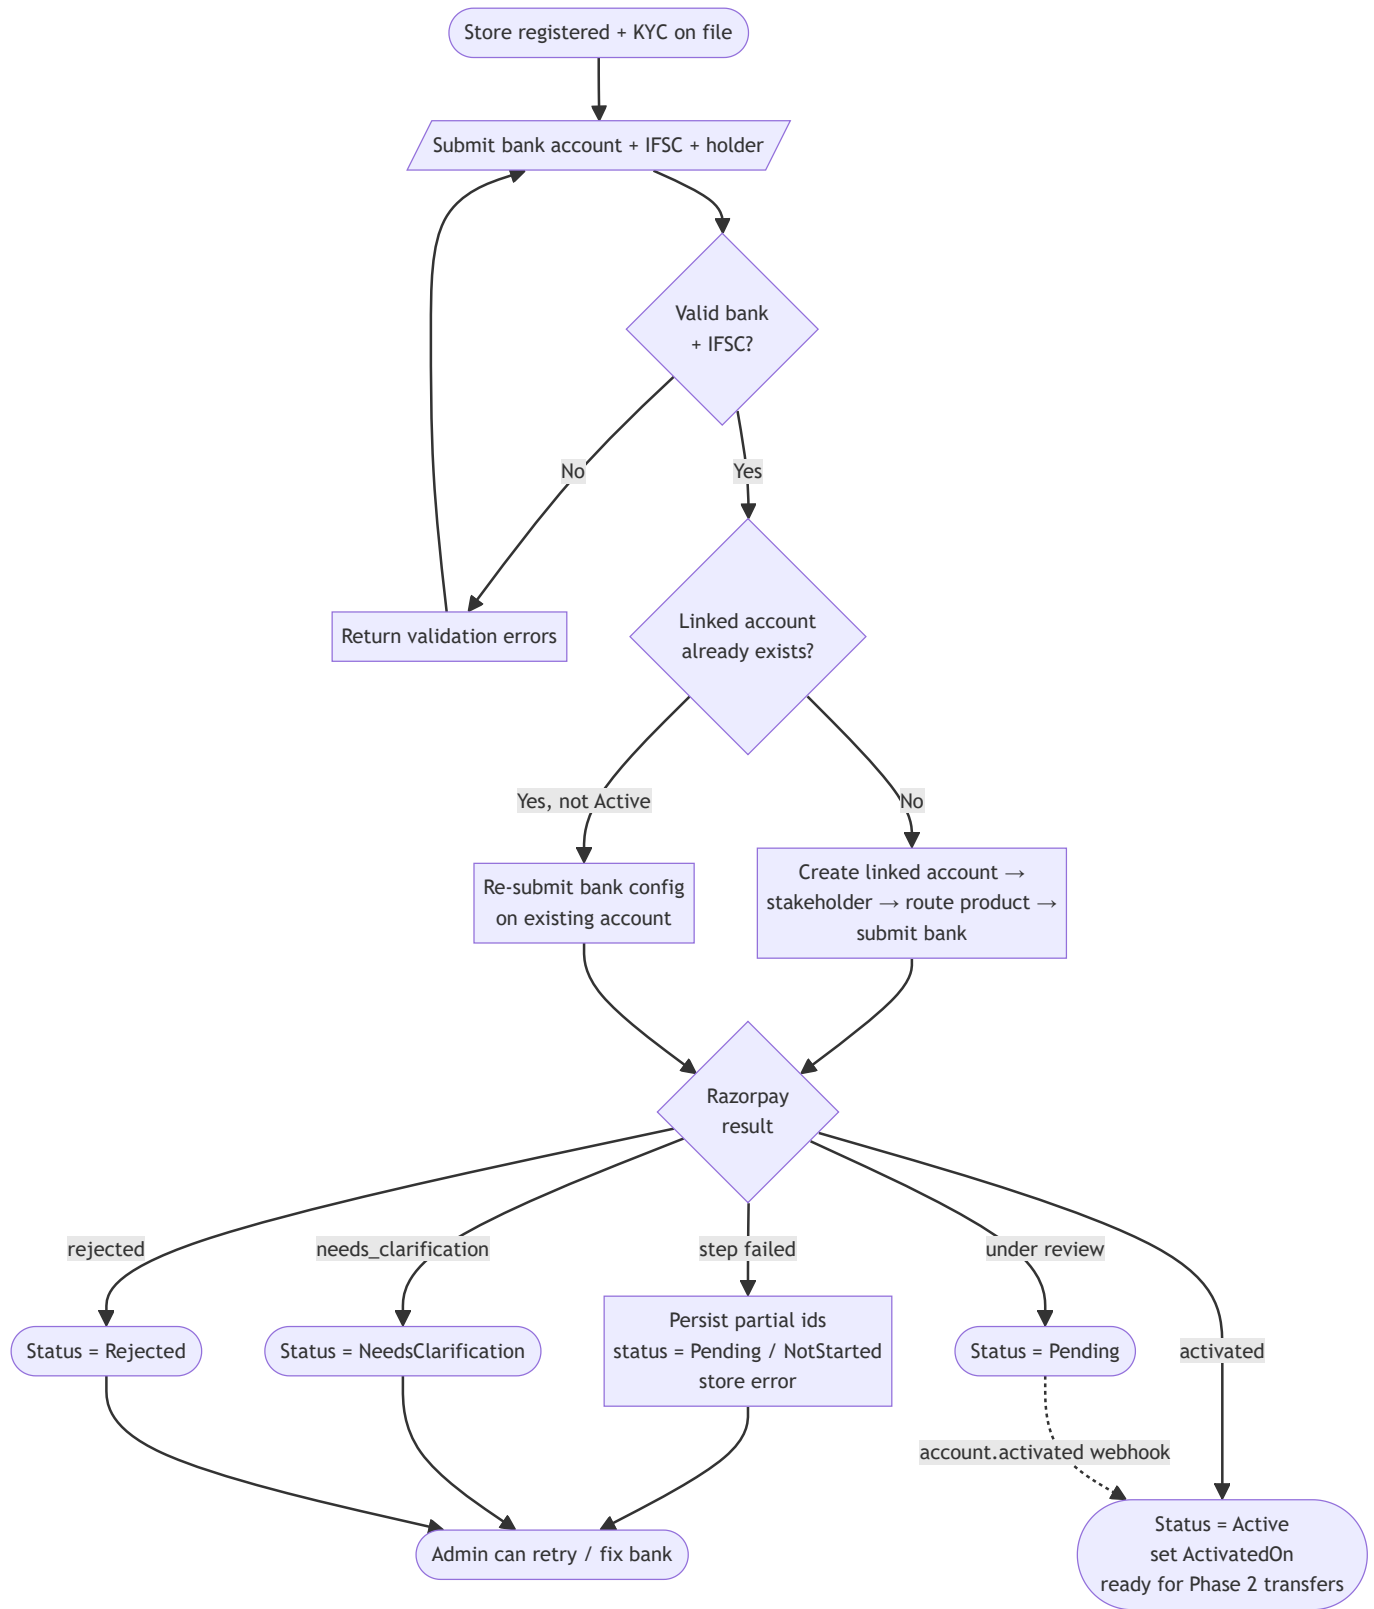

2. Sequence — Phase 1: Chemist Linked-Account Onboarding

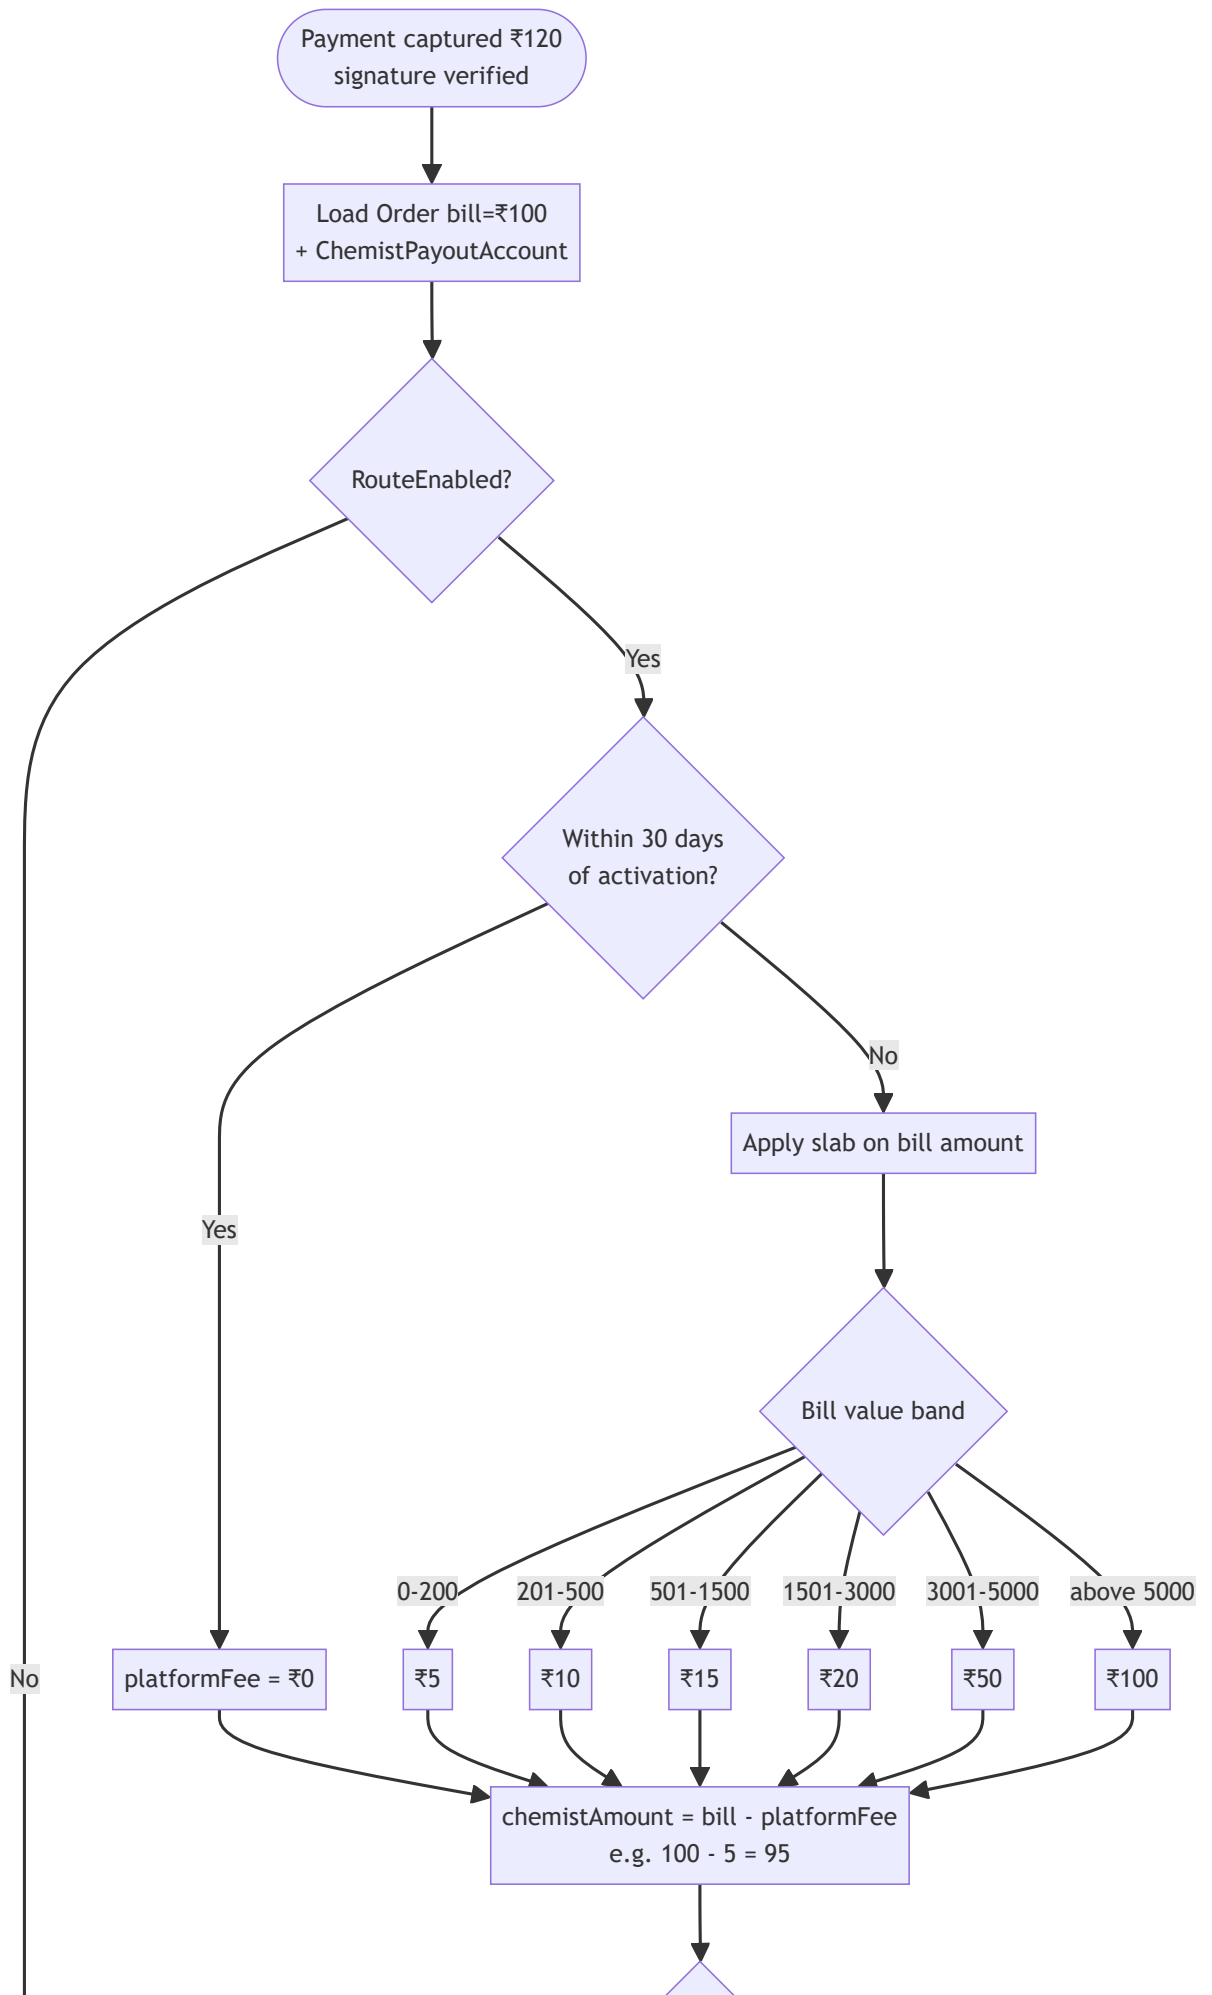

3. Sequence — Phase 2: Order Payment & Split

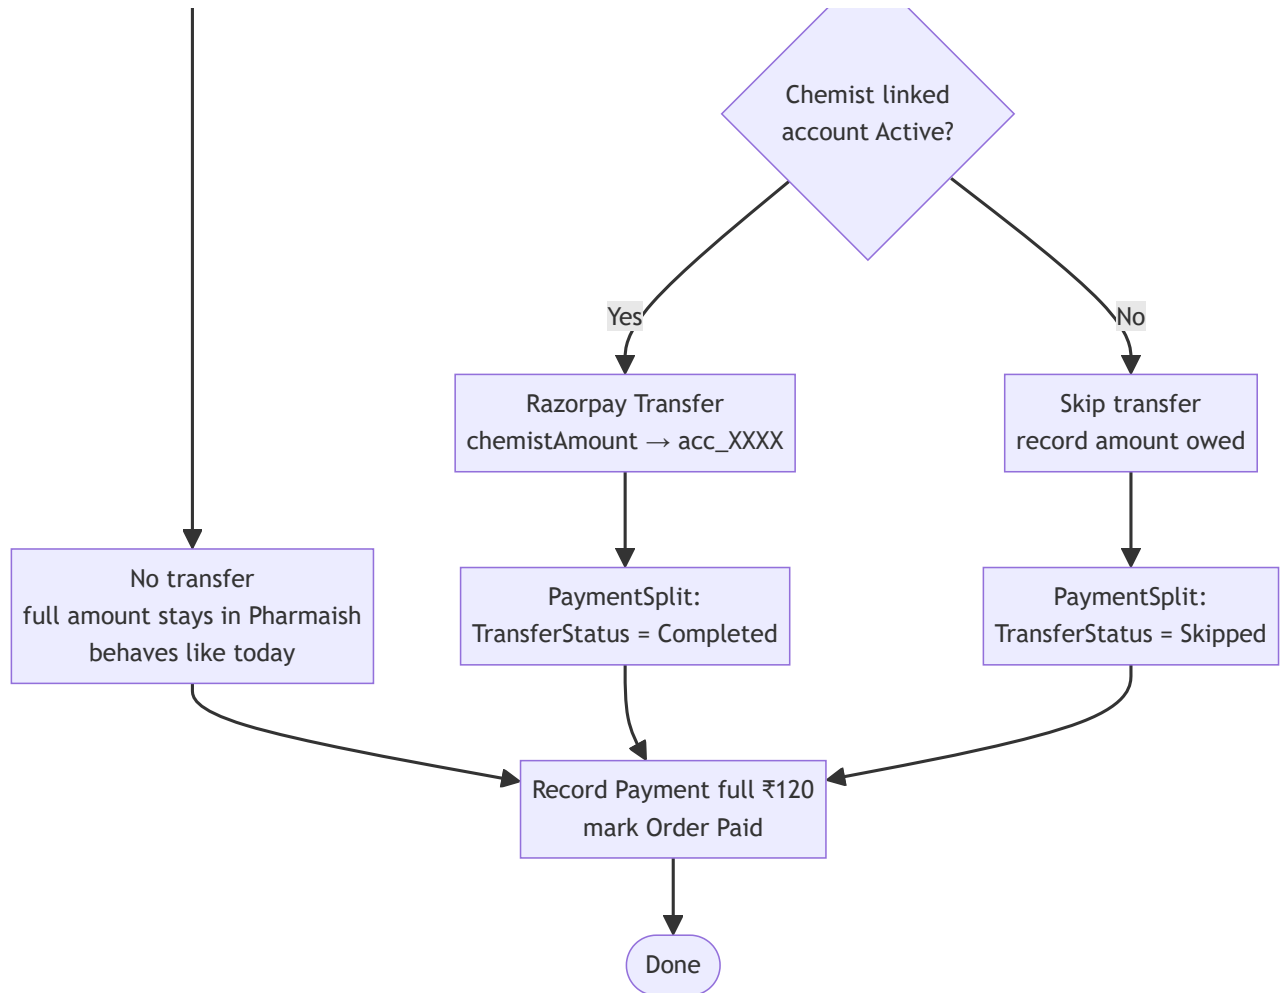

4. Flowchart — Chemist Onboarding State Machine

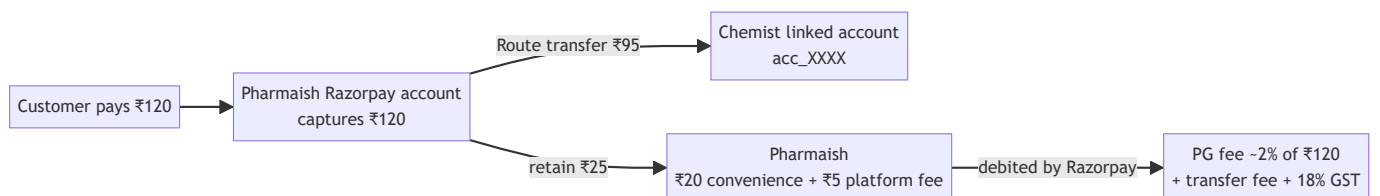

5. Flowchart — Payment Split & Platform Fee Slab

6. Money Split (worked example, ₹100 bill)

Notes: the ₹20 convenience fee and the platform fee (slab on the ₹100 bill) both stay with Pharmaish; Razorpay's own fees are deducted from the Pharmaish balance, not from the chemist's ₹95 transfer.
